

## Guide for Volatile Organic Compound (VOC) Compliance

VOC (Volatile Organic Compound Content) is essentially the solvent content of a coating or adhesive product. The GBCA (Green Building Council of Australia) have issued guidelines for VOC emissions within buildings that may relate to the health impact on occupants, which ATFA is subsequently working with industry in an effort to achieve.

The following points are advised:

1. The GBCA requirements are basically that of solvent content, or more precisely Volatile Organic Compound content (VOC).
2. Toxicity and VOC are not necessarily related. Low VOC does not necessarily mean lower toxicity than a high VOC coating or vice versa. Toxicity depends on type of solvent and the proportion of the solvent in the wet product.
3. Accordingly if toxicity information is required, the Material Safety Data Sheet (MSDS) of the product should be referred to prior to use of any product: web references are as indicated in the following tables.
4. The VOC's listed have been calculated on the European definition which Australia has also adopted – basically all solvents with boiling points below 250 deg C are considered VOC's. When consulting the manufacturer MSDS be aware that a different calculation method for the VOC may have been made – for example the USA method is to calculate VOC on the basis of VOC % after water has been removed from the formulation – unlike in Europe and Australia, in the USA some very volatile solvents are considered VOC exempt if they do not cause photo chemical smog.
5. AFTA has compiled the following as a guide only, which is believed to be correct at the time of publication.

Note: To ensure this document remains current it is requested that all named manufacturers advise ATFA immediately of any change. Changes will subsequently be maintained on the web based version of the document. Anyone holding this document should refer to [www.atfa.com.au](http://www.atfa.com.au) 'consumer services' for the latest version of this document. ATFA bears no liability for data provided by the contributing companies.

## Waterborne Coatings
