Problems – Detection and Solutions

About this training workshop

Who is this one-day workshop for?

We have floors of many types – solid strip, parquetry, engineered, bamboo and laminate ... and we also see many problems with floors of all these types. Why do these problems occur? Much of the time installation practices have been a significant factor and this can be attributed to insufficient knowledge about the product, inability to assess how the flooring will react after installation or at times the installer not adequately following installation instructions. However, at times product manufacture has been influential and it is important to be able understand when manufacture is a problem and when it is not.

This workshop will take you through a number of specific cases where floors have had problems, and in some cases, where the floor has needed to be replaced. By working through what went wrong, we can then work out how it could have been avoided. Your opportunity to be a 'floor detective'. The photos below show one such floor where the particleboard buckled off the joists and the second photo shows the replacement floor. Why did the first floor fail and the second floor not fail, and is still performing well today.

The workshop will cover floors of different types and problems that can be many and varied. It will give you the opportunity to refresh some of the fundamentals that are essential for floor performance and to hone your skills in detecting the real reason for the problem with the floor. But that is not all, we will also work through appropriate remediation strategies.

The workshop is ideally suited to those who have to deal with timber flooring problems and needing to sift through the varying opinions that often get presented when a flooring problem occurs. You may be in technical sales, an installer yourself, involved in insurance work or perhaps a supplier or product manufacturer. Irrespective, if you have to deal with the detection and solutions to timber flooring problems, you will benefit from attending this workshop.

Dates, Locations and Venues (please tick locations you are registering for)

Geelong	10 th April 2019 <input type="checkbox"/>	Sydney	26 th June 2019 <input type="checkbox"/>
Christchurch	28 th May 2019 <input type="checkbox"/>	Ballina	18 th September 2019 <input type="checkbox"/>
Perth	18 th June 2019 <input type="checkbox"/>	Adelaide	16 th October 2019 <input type="checkbox"/>

Venues to be advised.

Course duration Starts 9am Ends 4pm **Minimum numbers are required*

Delivery

The lead instructor for this course will be Tony Powell.

Course Outline

More specifically the workshop will cover:

- The main reasons why flooring problems occur
- Influence of product and site factors to floor problems
- Installation vs manufacturing factors with problem floors
- Considering reasonable solutions
- Detecting and determining solutions for solid timber floors
- Detecting and determining solutions for adhesive fixed engineered and bamboo floors
- Detecting and determining solutions for floated floors
